

Algorithm 2: MDAV

Input: $\mathbf{X}$, k
Output: $\mathbf{C}$: set of clusters

```

1  $\mathbf{C} \leftarrow \emptyset$ 
2 while  $|\mathbf{X}| \geq 3k$  do
3    $x_c \leftarrow \text{mean\_record}(\mathbf{X})$ 
4    $x_r \leftarrow \text{argmax}_{x_i} \text{distance}(x_i, x_c)$ 
5    $x_s \leftarrow \text{argmax}_{x_i} \text{distance}(x_i, x_r)$ 
6    $C_r \leftarrow \text{cluster}(x_r, k, \mathbf{X})$  // Algorithm 3
7    $C_s \leftarrow \text{cluster}(x_s, k, \mathbf{X})$ 
8    $\mathbf{C} \leftarrow \mathbf{C} \cup \{C_r, C_s\}$ 
9    $\mathbf{X} \leftarrow \mathbf{X} \setminus C_r \setminus C_s$ 
10 end
11 if  $2k \leq |\mathbf{X}| < 3k$  then
12    $x_c \leftarrow \text{mean\_record}(\mathbf{X})$ 
13    $x_r \leftarrow \text{argmax}_{x_i} \text{distance}(x_i, x_c)$ 
14    $C_r \leftarrow \text{cluster}(x_r, k, \mathbf{X})$ 
15    $\mathbf{C} \leftarrow \mathbf{C} \cup \{C_r\}$ 
16    $\mathbf{X} \leftarrow \mathbf{X} \setminus C_r$ 
17 else
18    $\mathbf{C} \leftarrow \mathbf{C} \cup \{\mathbf{X}\}$ 
19 end
20 return  $\mathbf{C}$ 

```

Figure 3 depicts the representatives (centroids) of clusters computed by MDAV with $k = 200$ on the example data set of Fig. 1. The figure also shows the decision trees that are obtained as explanations for three of the clusters.

Algorithm 3: cluster

Input: x , k , $\mathbf{X}$
Output: C : cluster

```

1  $C \leftarrow \{x\}$ 
2 while  $|C| < k$  do
3    $x_i \leftarrow \text{argmin}_{x_i} \text{distance}(x_i, x)$ 
4    $C \leftarrow C \cup \{x_i\}$ 
5    $\mathbf{X} \leftarrow \mathbf{X} \setminus \{x_i\}$ 
6 end
7 return  $C$ 

```

4 Empirical Work

We generated a data set consisting of 30,000 records, each with 10 numeric continuous attributes and a single binary class label using the `make_classification`
